Worksheet 9

Student Name: Nagesh Kumar

Branch: CSE

Semester: 5th

Subject Name: ADBMS

UID: 23bcs10608

Section/Group: KRG 2-A

Date of Performance: 30/10/2025

Subject Code: 23CSP-333

- Aim:** To understand and implement the setup of Amazon Relational Database Service (AWS RDS) by creating a database instance, configuring security groups, and establishing a secure connection between the local pgAdmin tool and the RDS instance hosted on the AWS Cloud.

2. Objective:

- To learn the basic concepts and features of Amazon Relational Database Service (AWS RDS).
- To create and configure a new RDS database instance on the AWS Management Console.
- To understand the role and configuration of security groups for controlling database access.
- To connect a local pgAdmin client to the AWS RDS instance securely using proper credentials and endpoint details.
- To verify successful database connectivity and perform basic operations through pgAdmin.

3. Code & Output:

1. Sign-in

2. Navigating to RDS Service

The screenshot shows the AWS Aurora and RDS service dashboard. The left sidebar contains navigation links for Databases, Performance insights, Snapshots, Exports in Amazon S3, Automated backups, Reserved instances, Proxies, Subnet groups, Parameter groups, Option groups, Custom engine versions, Zero-ETL integrations, Events, Event subscriptions, Recommendations (0), and Certificate update. The main content area is titled "Databases (0)" and features a search bar, a "Create database" button, and a placeholder message "No resources". A cartoon robot icon is positioned above the message. The top right corner shows account information: Account ID: 3961-8352-6319, Europe (Stockholm), and Shivanshu Ranjan.

3. Amazon RDS Dashboard Overview

The screenshot shows the Amazon RDS Dashboard. The left sidebar includes links for Dashboard, Databases, Performance insights, Snapshots, Exports in Amazon S3, Automated backups, Reserved instances, Proxies, Subnet groups, Parameter groups, Option groups, Custom engine versions, Zero-ETL integrations, Events, Event subscriptions, Recommendations (0), and Certificate update. The main content area is divided into sections: "Resources" (listing DB Instances (0/40), DB Clusters (0/40), Snapshots (0), and various parameter and option group counts), "Explore RDS" (with a "Start tutorial" button), "Create a database" (with a "Create a database" button), and "Recommended services" (which currently shows "No recommendations yet"). The top right corner displays account details: Account ID: 3961-8352-6319, Europe (Stockholm), and Shivanshu Ranjan.

4. Creating a New Database Instance

The screenshot shows the AWS RDS 'Create database' interface. In the 'Choose a database creation method' section, 'Easy create' is selected. Under 'Configuration', 'PostgreSQL' is chosen as the engine type. The PostgreSQL icon features a blue brain-like shape with a lightning bolt. Other options shown include Aurora (MySQL Compatible), Aurora (PostgreSQL Compatible), MySQL, MariaDB, and Oracle. At the bottom, there are links for CloudShell, Feedback, and various AWS terms like Privacy, Terms, and Cookie preferences.

5. Selecting PostgreSQL as Database Engine

This screenshot shows the detailed configuration for a PostgreSQL database instance. In the 'DB instance identifier' field, 'shivanshu-DB' is entered. Under 'Master password', 'postgres' is specified as the username. The 'Self managed' option for credentials is selected. The 'Auto generate password' checkbox is unchecked. The 'Master password' field contains '.....'. The 'Password strength' bar is at 'Neutral'. Below it, a note states: 'Minimum constraints: At least 8 printable ASCII characters. Can't contain any of the following symbols: / \ * @'. The 'Confirm master password' field also contains '.....'. The bottom of the screen includes standard AWS navigation links: CloudShell, Feedback, Privacy, Terms, and Cookie preferences.

6. Choosing Deployment Option and Template

VPC security group: default
Publicly accessible: No
Database port: 5432
DB instance identifier: shivanshu-DB
DB engine version: 17.4
DB parameter group: default.postgres17
Monitoring type: Database Insights - Standard
Performance insights: Enabled
Monitoring: Enabled
Maintenance: Auto minor version upgrade enabled
Delete protection: Not enabled

You are responsible for ensuring that you have all of the necessary rights for any third-party products or services that you use with AWS services.

Create database

7. Configuring Database Settings (Name, Username, Password)

Creating database shivanshu-db
Your database might take a few minutes to launch. You can use settings from shivanshu-db to simplify configuration of suggested database add-ons while we finish creating your DB for you.

Databases (1)

DB identifier	Status	Role	Engine	Region ...	Size
shivanshu-db	Creating	Instance	PostgreSQL	-	db.t4g.micro

CloudShell Feedback © 2025, Amazon Web Services, Inc. or its affiliates. Privacy Terms Cookie preferences

8. Setting Up Instance Size and Storage

The screenshot shows the pgAdmin 4 interface. In the top navigation bar, the 'Dashboard' tab is selected. On the left, the 'Object Explorer' sidebar shows 'Servers (3)' with entries for 'PostgreSQL 17', 'PostgreSQL 18', and 'shivanshu-DB'. A context menu is open over the 'shivanshu-DB' entry, with the 'Register' option highlighted. Other options in the menu include 'Create', 'Refresh...', 'Remove Server Group', 'Disconnect from all servers', and 'Properties...'. The main pane displays a brief about pgAdmin and quick links for documentation, the website, and community support.

9. Configuring Connectivity and VPC Settings

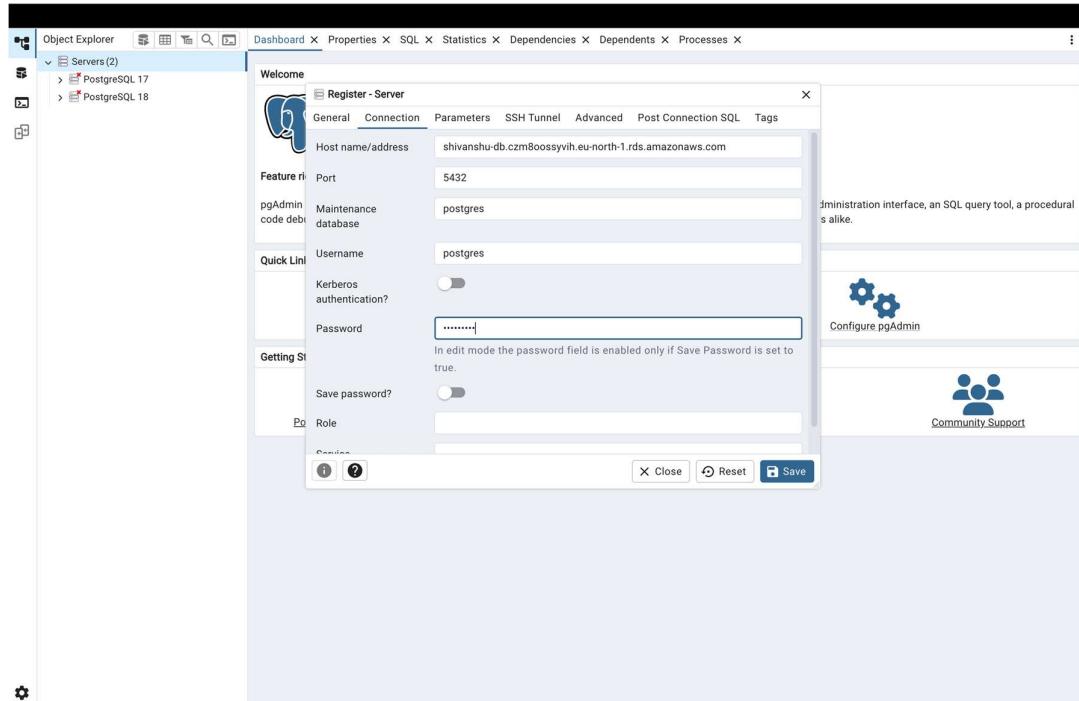

The screenshot shows the 'Register - Server' dialog box in pgAdmin 4. The 'General' tab is selected. The 'Name' field contains 'shivanshu-DB'. Under the 'Feature' section, there is a note about pgAdmin code debt. The 'Background' and 'Foreground' sections both have 'X' icons next to them. The 'Quick Link' section has a 'Connect now?' toggle switch which is turned on. The 'Getting Started' section includes links to PostgreSQL Documentation, pgAdmin Website, Planet PostgreSQL, and Community Support. At the bottom of the dialog are 'Close', 'Reset', and 'Save' buttons.

12. Reviewing and Creating the Database Instance

The screenshot shows the AWS RDS console for the 'shivanshu-db' database instance. The top navigation bar includes the AWS logo, a search bar, and account information (Account ID: 3961-8352-6319, Europe (Stockholm), Shivanshu Ranjan). The left sidebar has sections for Dashboard, Databases, Snapshots, Exports in Amazon S3, Automated backups, Reserved instances, Proxies, Subnet groups, Parameter groups, Option groups, Custom engine versions, Zero-ETL integrations, Events, Event subscriptions, Recommendations (0), and Certificate update. The main content area displays the 'Summary' tab for the 'shivanshu-db' instance, which is currently available. It shows metrics like CPU usage (21.27%), status (Available), role (Instance), engine (PostgreSQL), and region (eu-north-1a). Below the summary, tabs for Connectivity & security, Monitoring, Logs & events, Configuration, Zero-ETL integrations, Maintenance & backups, and a help icon are visible. The 'Connectivity & security' tab is selected, showing details about the endpoint, port (5432), networking (VPC vpc-086507ee77883ae1b, subnet group default-vpc-086507ee77883ae1b, subnet subnets subnet-0db6b45e321b700a, subnet-087377db566f545dc, subnet-0bac42bdab1e990c5), and security (VPC security groups default sg-0b4c8dc4647072099, Active). The bottom of the page includes CloudShell, Feedback, and standard footer links.

13. RDS Instance Creation in Progress

The screenshot shows the AWS EC2 Security Groups console for the 'sg-0b4c8dc4647072099 - default' group. The top navigation bar includes the AWS logo, a search bar, and account information (Account ID: 3961-8352-6319, Europe (Stockholm), Shivanshu Ranjan). The left sidebar shows the EC2 and Security Groups sections. The main content area is titled 'Edit inbound rules' and shows two existing rules: one for 'All traffic' from 'Custom' source and another for 'PostgreSQL' on port 5432 from 'My IP'. A new rule is being added, with 'Protocol' set to 'TCP', 'Port range' to '5432', and 'Source' set to 'My IP'. The bottom of the page includes Add rule, Cancel, Preview changes, and Save rules buttons.

14. Viewing Database Instance Details

▼ Additional configuration

Public access

Publicly accessible

RDS assigns a public IP address to the database. Amazon EC2 instances and other resources outside of the VPC can connect to your database. Resources inside the VPC can also connect to the database. Choose one or more VPC security groups that specify which resources can connect to the database.

Not publicly accessible

No IP address is assigned to the DB instance. EC2 instances and devices outside the VPC can't connect.

Database port

Specify the TCP/IP port that the DB instance will use for application connections. The application connection string must specify the port number. The DB security group and your firewall must allow connections to the port. [Learn more](#)

19. Successful Connection to AWS RDS Database via pgAdmin

The screenshot shows the AWS RDS (Aurora and RDS) console. The left sidebar navigation includes: Dashboard, Databases (selected), Performance insights, Snapshots, Exports in Amazon S3, Automated backups, Reserved instances, Proxies, Subnet groups, Parameter groups, Option groups, Custom engine versions, Zero-ETL integrations, Events, Event subscriptions, Recommendations (0), and Certificate update. The main content area is titled 'Deleting DB instance shivanshu-db' and shows a table of databases. The table has columns: DB identifier, Status, Role, Engine, Region ..., and Size. One row is selected, showing 'shivanshu-db' with a status of 'Deleting', engine 'PostgreSQL', region 'eu-north-1a', and size 'db.t4g.micro'. The top right of the main area has buttons for Group resources, Modify, Actions (with a dropdown menu), Create database, and a refresh icon. The top bar also shows Account ID: 3961-8352-6319, Europe (Stockholm), and the user name Shivanshu Ranjan.

4. Learning Outcomes:

- Understand the fundamental concepts and benefits of using Amazon RDS for relational database management in the cloud.
- Gain practical knowledge of creating and configuring an RDS database instance on AWS.
- Learn how to manage and secure database access using AWS security groups.
- Develop skills to connect a local pgAdmin client to a cloud-hosted RDS instance.
- Be able to monitor, manage, and test database connectivity and performance in a cloud environment.
